TTA RAPID® & RAPID Patella Luxation

The 3D-printed, Titanium **TTA RAPID®** system is a straightforward procedure to treat Cranial Cruciate Ligament Ruptures in canine and feline patients. TTA RAPID® only requires a partial osteotomy and one implant that features multiple points of screw fixation for extra security.

You can simply add a **RAPID LUXATION** spacer to the cage when your patient also suffers from a patella luxation.

Now with 60 different cages ranging from 2mm up to 15mm sizes, the **TTA RAPID®** is the most versatile technique designed to repair a cruciate ligament injury, from toy to giant breeds.

	Date	18. January 2024
	Location	Leipzig, Germany
€	Course Fee	495 EUR (excl. VAT) Registration through the event website
🗨️	Language	in German
💧	Lab	Dry Lab
+	ATF Credits	7 hours
👤	Faculty	Jörg Wackes DVM
i	Info	Will be held at the 12. Leipziger Tierärztekongress

DID YOU KNOW?

TTA-RAPID® Cages

from Rita Leibinger

- ✓ With **60 different cage sizes**, TTA RAPID® is the most versatile surgical technique designed to repair a cruciate ligament surgery.
- ✓ The **TTA RAPID® surgery** allows for shorter surgery times, which means less risk of an infection, less anesthesia, and less costs.
- ✓ The open sponge Titanium construct allows for rapid bone growth throughout the cage.
